Target version:			**Spent time:**	4.00 hours

Description

This application is perfect for java. Currently the application resides on the clx console making importing of data cumbersome from a persons desktop. Also, right now a separate .exe is required to export the data from the survey instrument, this feature could be incorporated into the new application.

History

#1 - 01/31/2015 10:16 PM - Kyle Hazelwood

I created the pojo classes and the sql script to create the database tables for this.
